

SUPERIA ZX Plate Certificate
(Risk Assessment on Food Compliance)

Basis:

Investigation Report from Fabes Forschungs GmbH (independent test institute).
Titel: *"Investigation Report" Commission number 8308-22 amended version 1*
Finalized: Munich, 25.10.2022

Summary:

It can be assessed, that regarding to real application conditions, substances from the printing plate SUPERIA ZX are not supposed to migrate in concentrations which will cause problems regarding user safety.

As Fujifilm SUPERIA ZX is a processless thermal plate which require On-Press-Development, we-recommend to dispose about the first 50 prints to be in line with this certificate.

It was OK with 10 prints this time according to "Investigation Report" from Fabes Forschungs GmbH, but it depends on the printing conditions. So we would highly recommend to check with your actual printing conditions.

Based on the 10 ppb Screening of the lead substances of the plate, the Conformity with the basic requirements of EU Framework Regulation (EC) No1935/2004 can be certified.

SUPERIA ZX Plates are therefore in **Compliance** with the actual existing European Food Contact Material Regulations.
