

# PRE-TEX®

**Pre-impregnated mini-rolls for automatic washing systems**

## COMPATABLE WITH:

- » Heidelberg
- » KBA
- » Komori
- » Roland
- » Ryobi
- » Sakuray
- » Mitsubishi
- » Akiyama
- » Presstek
- » Sheetfed offset presses
- » Web offset presses
- » Coldset
- » Heatset
- » For traditional inks and "UV" inks

### LESS WATER

Much less water used in the press.

### LESS CLOTH

Lower cloth consumption for the same number of washes. Less washcloth to dispose of after use.

### LESS SOLVENT

No dispersion solvents in the printroom. Solvent is contained exclusively in the Pre-tex rolls.

### LESS POLLUTION !

CERTIFIED BY

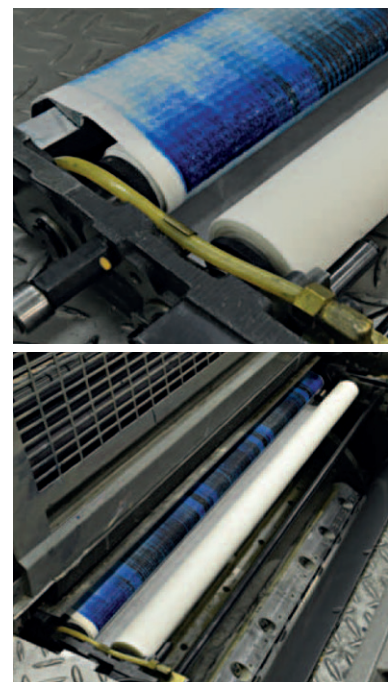

TEST CERTIFICATE NUMBER: 26921

**CMIS technology®**  
Controlled Micrometric Impregnation System

## 10 Reasons Why PRE-TEX® is UNIQUE

1. Washing quality superior to all other systems
2. Ready for use: no preparation is necessary
3. Uniform impregnation, NOT soaked to saturation (immersion)
4. Re-start-up with minimal waste, every other system creates a lot more
5. Micrometric impregnation, no wash on the plate, no fogging
6. Optimization of washing programmes without wasting cloth
7. No loss of wash on the grippers and moving parts of the press
8. Every wash guaranteed to be perfect in all the printing units
9. Wash times drastically reduced by half, also in the large size presses
10. Vacuum Packed, safe storage, unlimited shelf life

**MAXIMUM RESULTS – MINIMUM WASTE – MAXIMUM SAVING**

# CHARACTERISTICS

The most complete programme of pre-impregnated washcloth rolls on the market, suitable for all Offset and Web offset machines, available in all sizes and for use with all kinds of inks: CONVENTIONAL, UV, HUV, HYBRID, COLDSET and HEATSET.

The technical production procedure guarantees a perfectly uniform and stable micrometric impregnation on the complete surface of the washcloth roll. It guarantees a level of washing of incomparable quality, thanks to the perfect and gradual release of the wash solvent.

The high-quality PRE-TEX® washes, which guarantee a very good cleaning of the inks, were studied for impregnation, with parameters regarding the density, stability and tension-activity which are different to the normal washes used for standard wash procedures.

**Possibility of converting the washing systems in use.**

All the Offset and Web offset machines equipped with washing systems for blankets and impression cylinders, that use dry washcloth rolls, are convertible to the PRE-TEX® system.

In fact, as well as the "ready for use" PRE-TEX® in machines equipped with systems to work with pre-impregnated washcloth, we have also prepared a simple kit for the conversion of the wash systems that use dry washcloth. A small regulatory adjustment that does not involve any modification to the old systems in use but makes it possible to rapidly update all your machines.

The controlling of wash solvents in circulation in the machine is eliminated, there is no longer any need for expensive maintenance of the wash spaying systems, no more printing units with washing systems out of operation. The use of water in the washing process is eliminated or drastically reduced.

The ideal solution for machines equipped with mixed printing units: conventional and UV, Coldset and Heatset.

PRE-TEX® speeds up the washing process and eliminates waste when re-starting up, to an extent that no other washing system can guarantee today. PRE-TEX® really allows you to save and to easily quantify how much you save.

No pre-winding operation is required; the PRE-TEX® roll is ready to be mounted on the press for immediate use.

## TYPES IN PRODUCTION

**PRE-TEX® – for sheetfed machines and Web Coldset**

**PRE-TEX® – HEATSET for Web Heatset machines**

**PRE-TEX® – UV and HUV**

**PRE-TEX® – HYBRID**

## PRE-TEX® PLUS EMBOSSED SPECIAL QUALITY FOR WEB HEATSET AND COLDSET

**PREMIUM  
VACUUM  
PACKAGING**

**REGISTERED  
COMMUNITY  
DESIGN**

PRE-TEX® does not lose any of its quality during the storage time, thanks to our technical packaging process using a metallic multilayer material, patented and under the registered trademark AETERNUM PACK®, which impedes the migration of the wash and guarantees the perfect seal.

AETERNUM PACK® ensures absolute stability of the impregnation for long periods, up to the time that the roll is put into the machine and is an undeniable complement of quality.
